801-702-9668

Dear Homeowner,

Your stone surfaces are one of the most durable and visually impactful investments in your home. We're proud to have been selected to fabricate and install your countertops, and we're committed to standing behind our work.

We believe clarity builds trust. This guide explains what's covered under your fabrication warranty, what falls outside of warranty, and how to care for your surfaces long-term. If you ever have questions, our warranty team is here to help.

What's Covered

1-Year Fabrication Warranty

The following items are covered for one year from your closing date:

- Seams separating

If adhesive fails at a seam and the stone separates, we will repair and reset the seam.

- Mitered edges separating

If a mitered edge detaches from the top surface, we will repair the workmanship.

- Countertop shifting

If adhesive fails and the countertop separates from the cabinetry, we will re-secure it.

- Sink detachment

If your sink begins to separate from the countertop, contact us immediately to prevent damage. We will prioritize service to reattach the sink.

- Sharp or unpolished areas

If a section of the surface was missed during polishing, we will address it promptly.

- Splash or caulking separation

Minor gaps between backsplash and countertop can occur as new homes settle.

- We will refresh caulking for 4" backsplash installations

- Tile backsplash caulking must be addressed by the tile installer to ensure proper material match

- Chips, scratches, or stains (pre-closing)

Any chips, scratches, or stains reported before closing are covered.

Please inspect surfaces carefully during your final walkthrough.

What's Not Covered

Normal Wear & Tear (Repairs Available at Cost)

The following may occur over time and are not covered by warranty, but can often be repaired:

- Chips

After closing, chips are not covered. Larger chips are more difficult to fully disguise.

- Scratches

Surface scratches may be repairable. Deeper scratches may remain faintly visible after repair. Surface refinishing may cause slight height variations due to polishing.

- Stains / Dull Areas

Some stains can be lifted with poultices or specialty cleaners. We can recommend approved products.

- Cracks

Cracks cannot be fully repaired. We can stabilize them to prevent spreading.

If the crack is suspected to be a manufacturer defect, we will assist in submitting a claim to the quartz manufacturer.

- Fissures (Natural Stone Only)

Fissures are natural features in granite, marble, and quartzite and are not defects.

Sink Care (Not Covered by Countertop Warranty)

- Stainless steel sinks: Scratches and dents cannot be repaired — replacement required

- Porcelain sinks: Chips and cracks cannot be repaired — replacement required

Plumbing disconnection and reconnection costs are the homeowner's responsibility

This guide covers the most common situations homeowners encounter. If you're experiencing something not listed here, reach out to our warranty team and we'll help guide you.

If a request falls outside our scope of service, we can refer you to trusted, highly trained repair specialists. These professionals offer advanced repair services and have supported homeowners for decades.

Thank you for choosing Creative Granite + Design. We hope you enjoy your countertops for years to come.
